Nome: Antônio Augusto Boaventura Mariano

Prontuário: BV3054195

Disciplina: Administração de Redes de Computadores

Professor: Gaio

Módulo: 3º Semestre

Atividade de Gerenciamento de Sistemas Linux

Nesta semana, vamos considerar que, se precisamos gerenciar redes, precisamos de sistema operacional, seus serviços e aplicativos para isso. Escolhemos retomar o uso do shell (interpretador de comandos) do Linux.

Para começar, você buscará a função de diversos comandos básicos e intermediários no Linux, fundamentais para o trabalho com o prompt. Segue a lista de comandos que você deverá procurar utilizar em um terminal do bash (shell) na VM do Ubuntu ou outro.

Comandos:

- **cd**: Altera o diretório atual.
- **cd ..**: Move um nível acima na estrutura de diretórios.
- **cd -**: Retorna ao diretório anterior.

```
ubuntu@ubuntu:~$ pwd
/home/ubuntu
ubuntu@ubuntu:~$ ls
Desktop  Documents  Downloads  Music  Pictures  Public  snap  Templates  Videos
ubuntu@ubuntu:~$ cd Downloads/
ubuntu@ubuntu:~/Downloads$ cd ..
ubuntu@ubuntu:~$ cd Downloads/
ubuntu@ubuntu:~/Downloads$ cd -
/home/ubuntu
```

- **sudo**: Executa um comando com privilégios de superusuário (root).

- **mkdir:** cria uma nova pasta.

```
vboxuser@ubunto2026:~/Documents$ sudo mkdir marcelo
[sudo] password for vboxuser:
vboxuser@ubunto2026:~/Documents$ ls
marcelo
```

- **su**: Altera o usuário atual para root ou outro usuário (não foi possível executar no Virtual Box User – Ubuntu).

- **systemctl**: Gerência serviços do sistema (start, stop, status).

```
vboxuser@ubunto2026:~/Documents$ systemctl
  UNIT                                                                    >
  proc-sys-fs-binfmt_misc.automount                                       >
